

Compact computer/ printer/scanner/webcam all-in-one unit with dual LCD monitors.

Abstract

The computer/dual LCD monitors/printer/scanner/webcam all-in-one unit gives users fully capable multi-tasking abilities with the convenience of one unit. Currently, computer users need separate accessories attached to the computer in order to scan, print, or video conference. With the all-in-one unit, however, these tasks can all be accomplished on one compact unit without resorting to separate accessory attachments. In addition to these capabilities, the all-in-one unit is a fully-functional computer with a modem that enables Internet access, a television card that enables television viewing, a DVD ROM drive and dual LCD monitors. All of these functions can be accomplished simultaneously on the one unit; for example, users can check email using one LCD monitor, watch television news using the second LCD monitor, print a document and video conference, all on the same unit. The compact design of the all-in-one unit is also space-saving and portable.
